

JSC «Avexima» is a full-cycle Russian pharmaceutical company, covering the entire process from the synthesis of active pharmaceutical ingredients (APIs) to the production of finished dosage forms.

«Avexima» possesses a modern production complex, a research center, and a team of highly qualified specialists, which allows it to manufacture a broad portfolio of pharmaceutical products.

Currently the company's product portfolio includes more than 120 medicines from various pharmacotherapeutic groups in areas such as urology, gynecology, neurology, cardiology, endocrinology, gastroenterology and others.

The company's strategic goals are:

- Strengthening its market position;
- Contributing significantly to achieving the country's medicinal sovereignty;
- Enhancing the efficiency of medicine supply for citizens under the state program «Pharma-2030»;
- Continuous modernization of equipment, implementation of advanced technologies, and improvement of personnel qualifications.
